**Summarized Insights From Usability:**
Upon showing our high fidelity design to our client we did in the following way:
We first started with stats about our design from other outside sources. And we scored with an overall 3.7/5.

The following questions were asked:
1. Navigation and findability:

How easy was it to find the information or feature you wanted?

People centred design concepts: Information architecture and visibility.

2. Affordances and signifiers:

How clearly did buttons, links, icons, and other interactive elements communicate what they do?

Concepts: Affordances and signifiers.

3. Readability and typography:

How easy was it to read the text and understand the headings and content?

Concepts: Visual hierarchy and legibility.

4. Colour and visual appeal:

How appealing and consistent were the colours, contrast, and overall visual design?

Concepts: Gestalt principles, visual perception.

5. Responsive design:

How well did the website layout adapt to the device or screen size you used?

Concepts: Context of use, inclusive design.

6. Feedback and system status:

How clearly did the website respond when you clicked a button, selected an option, or completed an action?

Concepts: Feedback and visibility of system status.

7. Organization and consistency:

How logically were related items grouped, and how consistently were layouts and controls used?

Concepts: Gestalt proximity, similarity, consistency

8. Accessibility and inclusivity:

How easy was the website to use considering text size, colour contrast, and the clarity of controls?

Concepts: Inclusive design and accessibility.

9. User control and error prevention:

How easy was it to make choices, correct mistakes, and understand which actions were available?

Concepts: Constraints, user control, error prevention.

10. Usefulness and user satisfaction:

How well did the website meet your needs, and how satisfied were you with the overall experience?

Concepts: User needs, usability, user experience.

Our thoughts after the showing the client our high fidelity design:

1. The Client was able to navigate the website and different sections seamlessly with no problems.

2. The gradient colour was not liked by the client and ideally would like one solid colour.

3. A hyperlink to reportneedles.ca was not shown in our high fidelity design however is a very important aspect that needs to be included.

4. The website was too minimal and was missing more important tabs such as education, get help, get involved, FAQs and contact us.

5. Our high fidelity design had a donate button on every page of our design which was liked by the client.

Overall findings: Our high fidelity design was overall too minimal and we went for a too minimal approach to the design. Ideally we would need to add more to our website design to have it be more approved by the client. The gradient colour in our design was not approved by the client either. We now plan to use one solid colour in the future of our website design. A very high plus though was the clients ability to navigate our website.
