Summarized project background and business need:
Background: APSS is a Saskatchewan charity focused on harm reduction, as well as HIV and community support.

Business need: An accessible website that is in favour of icons and other images that display data. The current website has an AI generated image on the homepage and the client wants to move away from that to more real images.

Northstar and Carryover Customers:
Northstar: Individuals with high risk or live with HIV and other diseases.

Carryover: Community members and service users.

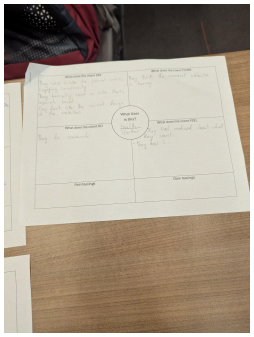

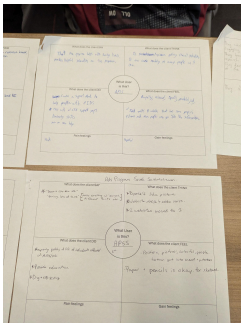

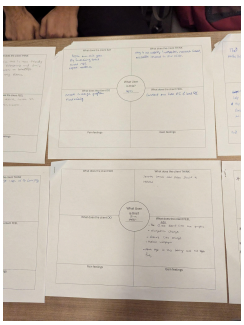

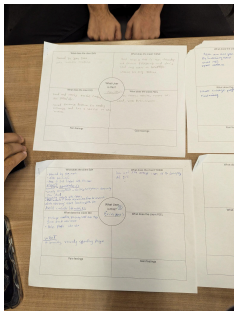

Project Assumptions:
Built a website on wordpress with the focus of graphics, infographics and real images rather than just AI images. Along with keeping data summarized and not as much text.

Project Constraints:
The ability to actually get real community members updated photos.

The ability to use wordpress.

The ability to summarize data without losing the core of it.

Empathy maps:

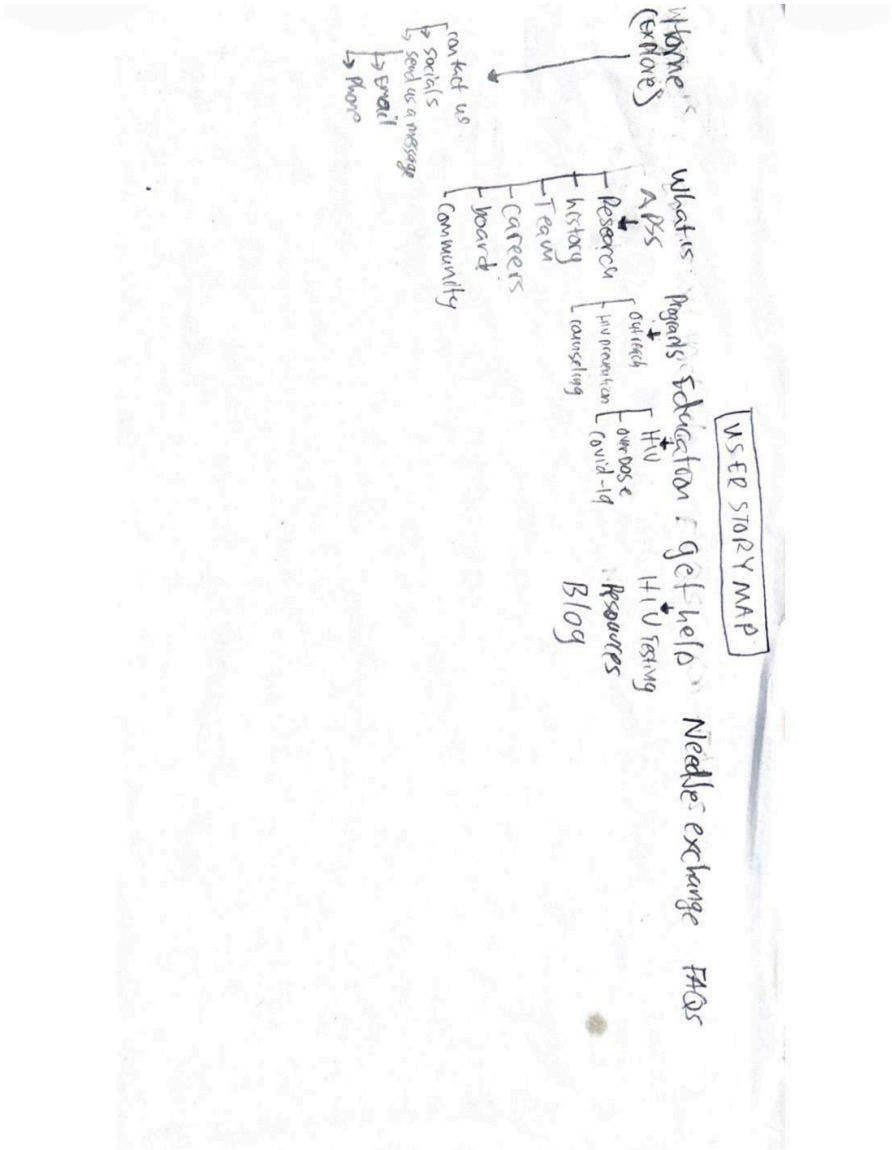

Insights or Needs chart:

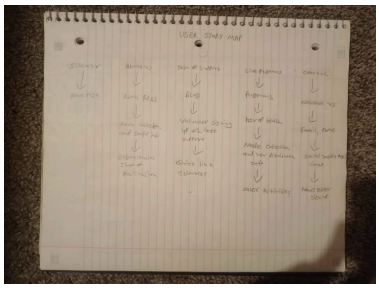

Current website has	User needs	Design
AI image on the homepage of the site.	Real pictures of community members.	Remove AI images and replace them with real photos of staff and community members.
Lots of text on the website.	Visuals such as graphics, infographics and icons.	Keep text not as heavy and more reliance on visuals.

Summarized customer notes:
The client wants a website that has more icons and infographics and is not so text heavy. The client does not want an AI generated image on the home page. And likely wants pictures of info or displaying data while still not having too much text.

MEETING
it is an aids prevention website, fun fact Saskatchewan has the second highest number of HIV cases

Needle exchange program

40TH anniversary this year, Big Fundraising

DISLIKES:

Overall look

AI image on homepage

Orange icons

“Its boring”

“Lots of text”

WANT:

- to have an easily navigable websites that everyone in the community can easily find
- an engaging and visually appealing website with reports
- two websites one for the organization and one for research purposes only
- More pictures to improve the community feel of the website
- THINK POSTERS, COLOR, PEOPLE, PICTURES

AVOID:

Any orange coloured icons

- Diff fonts and text sizes

PROBLEM:

- Visual look
- Accessibility
- Navigability

SOLUTION

- Better User interface
-
-
